

Chef & Sommelier has reinvented wine tasting, by re-thinking designs, glass sizes and materials.

All the Chef & Sommelier collections abound with innovative technology supported by the Arc International research centre, and have also been tested and approved by an expert professional committee.

Kwarx® is a new cutting-edge material.

Drop Control is used on the neck of carafes to prevent drips.

“Effervescence Plus” is a technology that develops an even delicate effervescence, delighting the eyes and the taste buds alike...

To take care of your glassware, Chef & Sommelier recommend the use of this glass cloth 100 % microfibre.

Kwarx®
by Arc International
Research Center **Advanced material**

Complete transparency

Kwarx® seems to vanish, to enable the range of colours in each wine to be appreciated.
Completely transparent glasses, due to the fact that they are completely colourless.

Never-ending sparkle

Kwarx® keeps its shiny sparkle wash after wash.
Extraordinary brilliance that has been tested in laboratory conditions over more than two thousand industrial washes.

Highly resistant

Kwarx® is incredibly resistant under everyday conditions.
Solidity is obtained by an invisible but very strong bond between the bases, the stems and the bowls of glasses, which results in a perfectly smooth surface which does not have weak points.

Kwarx®
combines the best qualities of all glass products and adds in purity.

Chef & Sommelier

Serving your talent

DRINKWARE
COLLECTION 2010

Arc International has created
Chef & Sommelier brand

Chef & Sommelier presents various collections of stem glasses, goblets and decanters for wine tasting, tableware and bars.

Taking its inspiration from the world's endless diversity, Chef & Sommelier enables you to discover - or rediscover - all the sensory delights of wine.

An invitation to a sensory feast and for culinary inspiration!
